

# FAÇADE PROTECTION WITH FUNCOSIL SNL

The universal silane impregnation

# PROTECTION AND BEAUTY FOR FAÇADES

Stop façade problems easily and effectively

## “All because of water“

A good number of the mechanisms that cause damage to buildings are directly or indirectly related to the absorption of moisture by the building material.

For example, when moisture is absorbed by a building material, pollutants are also absorbed. In a dissolved form, salts, for example, are transported into the building material: Pollutants in the air are taken up by rain (acid rain) and also transported into the façade.

Water repelling treatments are the only right answer for a number of the mechanisms that cause damage. With Funcosil hydrophobic agents you can save your bricks from damage and from losing valuable heat energy as well.

## Funcosil SNL

- Apply generously, simply by flow coating under gravity
- Repeat the process several times
- Keeps the masonry work dry, prevents the loss of heat
- Protects façades from aggressive pollutants in the air and acid rain
- Reduces the tendency to soil or become infested with algae
- Prevents damage to masonry caused by frost
- Universal use
- Clear, does not leave a film
- Vapour permeable
- Waterproof, even against driving rain
- Alkali resistant
- Ready to use

## Funcosil SNL Silane Impregnation

- Test report No. C 967 63 B
- Brick and clinker
- Concrete
- Sand-lime brick
- Renders
- Fibre-cement
- Natural stone
- Aerated concrete
