

Unique Cream Stain for Use Outdoors

Aidol Wood Cream is the world's first wood preservative stain on a cream base. The product consists of a special, new type of oil-water emulsion and is particularly suitable for wood facades, roof underfaces, wood used in gardens, carparks, etc.

Aidol Wood Cream combines the advantages of different types of stains without their disadvantages.

The main advantage of the product is, of course, its outstanding working properties: as opposed to conventional, thin-liquid stains, Aidol Wood Cream can be applied in thick layers with a brush because of its cream form.

While many stains must be applied up to three times, wood preservation and weather protection can be taken care of in just one working operation in ideal situations! And as a rule it's not necessary to cover everything because the consistency of the product makes application neat instead of messy.

Wood Preservative Cream only from Remmers

- ✓ Fast working
- ✓ Only **one** working operation necessary
- ✓ Penetrates deeply and does not drip
- ✓ Flows by itself without brushmarks
- ✓ Protects against blue stain and algae as well as moisture & UV-rays

Properties

- Combines the advantages of different types of stains without their disadvantages
- Does not drip: covering work is not necessary
- Penetrates deeply; high application rates are possible in one working operation
- Optimal flow properties and brilliant results
- Protects the wood against blue stain, algae, UV-rays and moisture
- Does not tear or peel and does not need to be sanded

Tips & Interesting Facts:

Aidol Wood Cream's formulation protects against blue stain. The product is a real cream – not just a gel stain. That's why it can penetrate deeply and be applied in just one working operation on rough sawn wood. A second working operation may be necessary for dressed wood and hardwood. Aidol Wood Cream is simply applied with a brush used for stains. Use wood preservatives safely. Always read the label and product information before using.

Range of use

- For protection of wood without static loads or ground contact in outdoor areas against blue stain
- Great for working overhead because of its cream consistence

Outdoors:

- Facade
- Roof eaves
- Shutters & balcony railings
- High quality fences
- Palisades & pergolas
- Arbours & carports
- Wood decks, bridges & footbridges
- Screen walls

Container sizes:

- 0.75 l
- 2.5 l
- 5 l

Application rate:

- 2.5 l are sufficient for approx. 12.5 m²
- According to RAL Quality and Testing Provisions: 200–250 ml/m²
